Suggested Installation Instructions for:

601-717, 1978-1982 Single Terminal

601-719, 1980-1982 Dual Terminal

INTRODUCTION

The Mid America Designs' Hood Lamp Switch Kit allows you to manually control the underhood engine compartment light, eliminating dead batteries caused by leaving the engine compartment hood open too long. Installs in just minutes!

INSTRUCTIONS

1. Find the underhood engine compartment lamp connection. This will be located near the driver's side front wheel well. (The lamp connectors are the same as in this harness.)
 2. Disconnect and separate the connectors, leaving enough room to insert the switch.
 3. Simply plug the harness' male and female connectors into the corresponding connectors from step 2.
 4. Test the unit by flipping the toggle switch a few times.
 5. Use the nylon wire ties included to secure the unit to the vehicle.
- ***SUGGESTION***** *Securing the harness upside down (i.e. switch pointing to the ground) will give a stock appearance as well as prevent dust or water from welling up in the unit.*
